

1.0 - Concept: As-Built Report Generator

Jira Project: [Installs] Create As-Built record functionality

 [CSSCRUM-4186: \[Installs\] Create As-Built record functionality](#) TO DO

Initial Kick-off Meeting Notes: 8/29/25 @ 12:30pm PST

- Travis Mickelberry
- Mike Slisinger
- Brad Faas
- Ray Stamps

Goal:

- Define method/approach to generate standardized post deployment "As Built" Reporting

Agenda:

- Define information to include, level of detail, and format
- Identify data sources, available tools, and gaps
- Scope requirements and target timeline

Target Outcome:

- Set MVP requirements and timeline target
-

Research: Identify Information Available via VAST API

Cluster Hardware Details:

- BOM
 - Part Numbers*
 - Quantities
 - Serial Numbers
- CBoxes
 - Quantity
 - Hardware type & manufacturer

- # of Nodes
- # of NICs
- B2B enabled?
- Encryption enabled?
- Similarity enabled?
- VAST Code Version(s)
- Rack Height (U#)
- DBoxes
 - Quantity
 - Hardware type & manufacturer
 - # of Nodes
 - B2B enabled?
 - VAST Code Version(s)
 - Rack Height (U#)
- Switches
 - Quantity
 - Hardware type & manufacturer - Mellanox / Cisco / Aruba
 - Protocol - Ethernet / IB
 - Ports Count - 16 / 32 / 40 / 64
 - Port Speed(s)
 - Port Function - Node / IPL / ISL / MLAG
 - Ports in use
 - Ports Available
 - Switch role - Master / Slave*
 - Switch tier - Leaf / Spine*
 - Firmware Version(s)
 - Rack Height (U#)*
 - Cables - direct / splitter*
- Northbound Connection - Switch to Switch / CNode to Switch*

Cluster Deployment Details:

- Usable Capacity
- Licensed Capacity

- Protocol - NFS, SMB, Object, Block, etc
 - Use Case(s) - AI, ML, HPC, DB, BU, Cloud, Hybrid, etc*
 - Advanced Features - Replication, DataBase, etc
-

Cluster Administration Details:

- Cluster Name
- Cluster PSNT
- Cluster VMS VIP
- Default Users & Passwords*
 - VMS
 - IPMI
 - Mgmt Port
 - Tech Port
- IP Information
 - Network Services
 - DNS
 - DNS Search Domain
 - NTP
 - AD
 - LDAP
 - Other
 - CNode & DNode & Switch Management
 - Port Label
 - Port IP
 - Port Function
 - IPMI
 - Mgmt Port
 - Tech Port
 - Data Network
 - VIP
 - Replication
 - Other
- Node to Switch to Switch Connectivity map*

- Network Port Map
- Switch Configuration*
- Switch Cable Routing Validation Report*

NOTE: * indicates API alternative or manual data entry required

Data Requiring Alternative Methods

The following data points will require manual input or the use of external tools:

- Hardware:
 - Bill of Materials (BOM) part numbers
 - Switch roles (Master/Slave) and tiers (Leaf/Spine)
 - Cable types (direct/splitter)
 - Deployment:
 - Use cases (AI, ML, HPC, etc.)
 - Administration:
 - Default users and passwords (should be managed securely and not stored in the report)
 - Node to switch to switch connectivity map
 - Switch configurations
 - Switch cable routing validation report
-

Example - Manually Generated Report:

**As Built:
Rack Layout**

VAST Data Platform Hardware:

- Qty 1 – CBoxes
- Qty 3 – DBoxes
- Qty 2 – 32-port NVMe switches
 - Decom: 2x 16-port NVMe switches

Hardware provided by Fortinet:

- Qty 1 – Mgmt switch (TOR GbE)
- Qty 2 – Prod Switches (GbE)
- Qty 4 – SW MLAG Connections
 - Including QSFPs & Cables

VAST Data Platform Mgmt & Prod Connections:

- **CBox 1** – 4x mgmt ports
- **Switch-B - 32-port NVMe** – 1x mgmt port / 2x prod data ports
- **Switch-A - 32-port NVMe** – 1x mgmt port / 2x prod data ports
- **DBox 1** – 2x mgmt ports
- **DBox 2** – 2x mgmt ports
- **DBox 3** – 2x mgmt ports

U26/27 – CBox-1 – Mgmt IPs: 10.20.62.135-138

U24 – Switch-B – Mgmt IP: 10.20.62.127/24 – Default U/P: cumulus / CumuTusLinux!

U22 – Switch-A – Mgmt IP: 10.20.62.126/24 – Default U/P: cumulus / CumuTusLinux!

U20 – DBox-1 – Mgmt IPs: 10.20.62.139-142/24

U18 – DBox-2 – Mgmt IPs: 10.20.62.143-146/24

U16 – DBox-3 – Mgmt IPs: 10.20.62.152-155/24

VAST

2

Rack – Front View

Switch Migration (6/23/25):

- U25 – Add 32-port Switch B
- U24 – Add 32-port Switch A
- U23 – Remove 2x 16-port switches / Decommission

Capacity Expansion (6/24/25):

- U16 – DBox 3 – Staged for Expansion on 6/24/25

Rack – Rear View

Pending:

- U25 – Switch B Relocate to U24

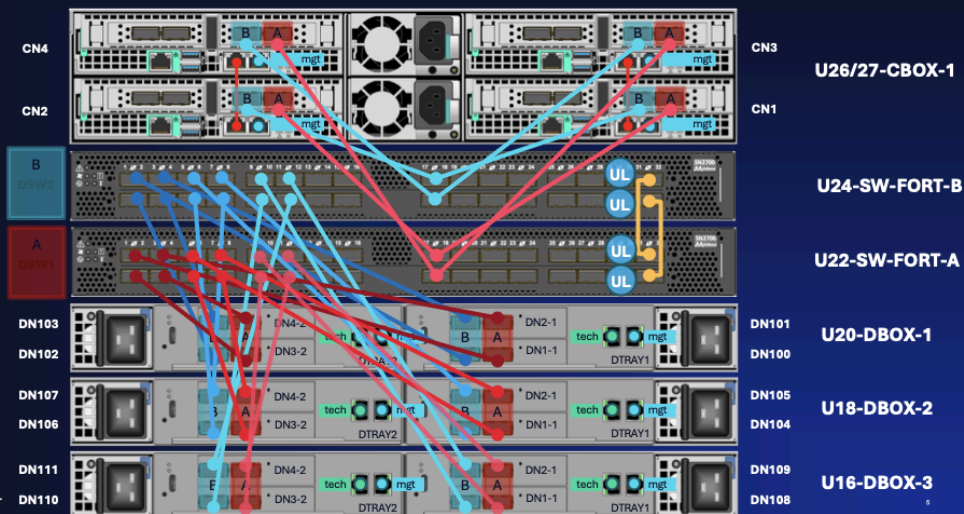

- U24 – Switch A Relocate to U22

Data Network Connections:

- 4x 100GbE Uplink Data Paths
- 8x 50GbE CBox Split Data Paths
- 2x 100GbE IPL Switch Paths
- 24x 100GbE DBox Data Paths

Backend Data Network – Connection Map

Variables for switch_conf.py

- OTT SW Migration: 16-port to 32-port
- Onyx to Cumulus
- Created on: 6/23/25

```
##@ update Mellanox Onyx to Cumulus
New default userpw: cumulus / CumuTuxLinux

##@ add the following exports within command line:
export MLNX1=10.20.62.126
export MLNX2=10.20.62.127
export MCDIR=/24
export MGNW=10.20.62.1
export CLUSTERNAME=VAST-FORTINET02
export UPLINKMTU=9216
export NTP1=208.91.112.63
export HOSTNAME=SW-FORT-A

##@ switch_conf.py file location:
cd ~/Documents/Customers/Fortinet/OTT/switch_conf-resources

##@ Command w/Options
python3 switch_conf.py cumulus --mgmt-ip $MLNX1,$MLNX2 --mgmt-subnet $MCDIR --mgmt-gateway $MGNW --dnode-ports 1-12 --cnode-ports 17,18,2 --external-vlan 221,701,1811 --l3-linkup --ip-ports 31,32 --cluster-name $CLUSTERNAME --mtu $UPLINKMTU --ntp $NTP1 --hostname $HOSTNAME

##@ File output notes:
Edit switchA.conf hostname to SW-FORT-A
Edit switchB.conf hostname to SW-FORT-B

##@ login via serial console (unconfigured switch)
Copy / Paste switch_conf file content to switch console
Run nv config apply -y & nv config save after conf completes successfully

##@ switch verification commands
nv config show
nv show int
date
nbpq -p
nv show mgmt

##@ Apply --vlan network setting to C & D Node (req. for Cumulus)
Add --vlan flag and run configure_network via change_on.sh
See procedure in appendix
```

Switch Migration Procedure

- Working Session: 6/23/25
- Fortinet Lead: Mansoor Ahmad Baig
- Local SE: Elie Awad
- Account SE: Ray Stamps
- SMEs: Madu, Casey, Marcus

```
##@ Pre-Staging Requirements
- Upgrade New switches to latest version of Cumulus (5.11.1 as of 6/23/25)
- Generate switch port map for cabling
- Generate switch conf files using switch_conf.py (see above)
- Validate healthy cluster - ash access to all nodes
- Confirm Open Support Case with CS
- Create Event in Field Activity Calendar
- Notify / Coordinate with CoPilot CSM

##@ Switch Migration Procedure

##@ Manager Cluster Dependencies
# Deactivate Replication @ Source Cluster
VMS/Data Protection/Protected Paths, Select All, Right-click, Select Deactivate, Confirm

# Disable Call-Home
VMS/Settings/Call Home/Cloud, Toggle Enable to Disable, Save

##@ Set --vlan flag - All Nodes

# Deactivate cluster / Enter Maintenance Mode
VMS/Infrastructure/Cluster, Right-click cluster, Select Deactivate, Confirm

# SSH to CNode1 - Tech or Mgmt Port

# Test SSH access / set DONT_RUN_LEADER on all CNodes / Verify
clash -g cnodes echo vast
clash -g cnodes touch /vast/data/DONT_RUN_LEADER
clash -bg cnodes ls /vast/data/DONT_RUN_LEADER

# Run Suicide command
vtool suicide
```

```
# Verify containers aren't stuck / confirm vms & leader don't exist
clash -ba "docker ps -a"
clash -ba "docker ps -a"
find-vms
find-leader

# Cluster in Maintenance Mode

##@ Add and Apply --vlan to configure_network on all nodes

# Pull & Save copy of configure_network settings from all nodes
clash -a "grep -a 'command' /vast/configure_network/configure_network.log | grep -a 'w-load-params-from-file' | tail -1" | awk -F'|' '{NF}' > /tmp/change_on.sh

# Copy output to txt file

# Modify configure_network file for all nodes to include vian

# Start screen on CNode1
sudo chmod 777 /tmp/screen
screen -S on

# Append --vlan
clash -a "sed -i 's/--vlan/ /tmp/change_on.sh'"

# Add sudo
clash -a "sed -i 's/--vlan/ /tmp/change_on.sh'"

# Validate all files look correct
clash -a -l "cat /tmp/change_on.sh"

##@ Apply configure_network - Run from CNode1

# Verify internal IPs use x.x.128
ip -br a | grep bond

# Run configure_network on all nodes except node1 (Confirm IP matches CNode1 bond IP captured above)
clash -a -x 172.16.128.1 "bash /tmp/change_on.sh"

# Verify SSH access through Mgmt port on alternate CNode (other than CNode1)

# Restart SSH connection to CNode1

# Restart screen on node1 (IMPORTANT)
sudo chmod 777 /tmp/screen
screen -S on

# Run configure_network on CNode1
bash /tmp/change_on.sh
```

```
##@ Reboot all nodes
clash -a "sudo shutdown -r +1"

##@ Move Cables over to new switches

##@ Verify access to all nodes

# Run A & B path validation scripts

echo 'data' List switch name and IP addresses of all A side switches... ;
clash -ba "dev=10 | a | egrep -veth | egrep -ab | sort -t -n | head -1" | awk '{print $NF}' | awk -F'|' '{print $1};' | maddm=10 | a | $dev | grep -e | awk '{print $2};' | E $sudo dmidecode | grep -A1 Chassis Information | grep -A Supermicro | && dev=10 | a | $dev | grep -e | awk '{print $1};' | sudo tcpdump -nn -v -i $dev -e 1500 < 1 -Z root ether proto 0x800 and not ether host $macaddr > /dev/null | egrep 'System Name TLV|V|P|' | awk '{print $NF}' | paste -d ' ' -

echo 'data' List switch name and IP addresses of all B side switches... ;
clash -ba "dev=10 | a | egrep -veth | egrep -ab | sort -t -n | head -1" | awk '{print $NF}' | awk -F'|' '{print $1};' | maddm=10 | a | $dev | grep -e | awk '{print $2};' | E $sudo dmidecode | grep -A1 Chassis Information | grep -A Supermicro | && dev=10 | a | $dev | grep -e | awk '{print $1};' | sudo tcpdump -nn -v -i $dev -e 1500 < 1 -Z root ether proto 0x800 and not ether host $macaddr > /dev/null | egrep 'System Name TLV|V|P|' | awk '{print $NF}' | paste -d ' ' -

##@ Bring up cluster

# Remove DONT_RUN_LEADER file from all CNodes
clash -g cnodes rm /vast/data/DONT_RUN_LEADER
clash -bg cnodes ls /vast/data/DONT_RUN_LEADER

# Confirm VMS & Leader start-up
find-vms
find-leader

##@ Activate cluster
VMS/Infrastructure/Cluster, Right-click cluster, Select Activate, Confirm

# Activate Replication @ Source Cluster
VMS/Data Protection/Protected Paths, Select All, Right-click, Select Activate, Confirm

# Enable Call-Home
VMS/Settings/Call Home/Cloud, Toggle Disable to Enable, Save
```
